e-mail address : algology@kuleuven.be

Presentation

Pain is one of the most frequent symptoms that makes patients first go to their GP and then a certain number of consultants.

One adult in five in Europe (and 23 % of Belgians) suffer from chronic pain that affects the quality of their social and professional life, and is ultimately a public health problem.

The  $\zeta$ biopsychosocial $\zeta$  model offers a horizontal and multidisciplinary approach to pain, with the goal of reducing it as much as possible, while maximising the patient's quality of life, autonomy and mobility.

Healthcare professionals require specific training concerning this approach.

Special conditions of access / students concerned

The certificate is open to:

- holders of a master's degree in medicine, enrolled in a specialist programme (outside general medicine)
- holders of a specialist qualification (except general medicine)
- holders of a master in medicine in de geneeskunde, enrolled in a master of medicine in de specialistische geneeskunde (recognised by the Flemish Community)
- holders of a master in medicine in de specialistische geneeskunde (recognised by the Flemish community)

N.B.: for specialists in training, priority will be given to interns in their last or penultimate year of specialisation.

Prerequisite: good knowledge of spoken and written English.

Duration of the training

A 40 ECTS programme over a two-year cycle.

Courses programme

#### Teaching Collegiality :

Coordinators : M.E. FAYMONVILLE
