**Information**

Professor Marie-Christine SEGHAYE  
Paediatrics  
CHU, Notre Dame des Bruyères - 4032 Liège  
Phone number : 04/367.92.75.  
e-mail address : mcseghaye@chu.ulg.ac.be

**Presentation**

The long term consequences of tracheal intubation in children are under-estimated and contribute significantly to long term morbidity. The proposed course aims to prepare doctors who are likely to have to practice tracheal intubation in new born babies or in children, to do so effectively and atraumatically. The course combines the presentation of theoretical information with practical exercises on an endoscopically-controlled model.

**Special conditions of access / students concerned**

This course is aimed at doctors who have specialised or who are specialising in paediatrics, neonatology, anaesthetics, reanimation and emergency medicine.  
Interested individuals should contact the head of the course to discuss their application.  
Number of people enrolled: maximum 15 students.

**Duration**

- 15 hours of theory classes: lectures
- 15 hours of practical work: learning how to perform tracheal intubation on a child using an endoscopically controlled model.
- Total for the course: 10 credits.

**Collegiality**

Coordinator : Marie-Christine SEGHAYE  
Josef HOLZKI

**Assessment**

Successfully passing these examinations (written and oral tests) leads to the certificate being awarded.

**Registration**

- Where ? :  
ULg lifelong learning unit (formation.continue@ulg.ac.be - 04/366.91.07).  
Documents to be presented : Registration approval from the Dean.  
Registration fees :  
\* 100 EUR  
\* No registration fees for students enrolled at the ULg (additional enrollment).

**Compulsory courses**
