

#### Cycle view of the study programme

B1 Or Th Pr Au Cr

Depending on your educational background or depending on the focus, it is possible that the prerequisites / corequisites for the 1st year of the programme are presented in the block 2. You are therefore invited to read through the list of courses in block 2 even if you are registering for the first time in this master.

As part of the Master in Mining and Geological Engineering, students must follow or approve 60 core training credits (including the placement and final dissertation), 30 credits from one of the specialised courses on Mineral Resources and Recycling, Environmental and Geological Engineering or 30 credits from a course of their choice.

Ideally, students studying for the master's degree will have acquired the competences and knowledge corresponding to the 40 credits of technical courses specific to the field of 'Georesources and Environmental Geology', taught within the framework of the Bachelor in Civil Engineering.

The master's is 'bilingual French/English'. Therefore, students who actively master French and/or English and another language passively can take all the classes. On a practical level, students can ask staff questions in both languages. Course material exists in both French and English (pdf, ppt and reference books). Students must indicate in which language they would like the questions to be.

An organised, but optional, final-year trip allows the future professionals to take part in guided tours of companies and exceptional foreign geological sites.
