Notice : In the coming months, a new Royal Decree governing the field of radioprotection should be announced in Belgium to meet the requirements of the European Directive setting the basic standards relating to health protection against the dangers resulting from exposure to ionising radiation (2013/59/EURATOM of 5/12/13). The Royal Decree should also define a less ambitious training programme for radioprotection officers (RPOs)(formerly responsible for surveillance). Appropriate training of an as yet undefined number of hours will be required. Course modules may be created in order to respond to the provisions of the future regulation in terms of training for RPOs. These course modules will be available for anyone wishing to meet the future regulatory requirements and to obtain their qualification as a radioprotection officer on a specific site.
