Depending on your educational background or depending on the focus, it is possible that the prerequisites / corequisites for the 1st year of the programme are presented in the block 2. You are therefore invited to read through the list of courses in block 2 even if you are registering for the first time in this master.

As part of the Master in mining engineering and geology, each student must complete or validate 55 credits of the core curriculum (including internship and master's thesis), 30 credits of the specialised focus, and 25 credits of elective courses.

Ideally, students entering the Master's programme will have acquired the skills and knowledge corresponding to the 40 credits of technical courses specific to the 'Georesources and Environmental Geology' field organised as part of the Bachelor's degree in civil engineering.

The master is "bilingual French/English". Therefore, students who actively master French and/or English and another language passively will be capable of following the classes.

On a practical level, students can communicate with staff in both languages. Course material exists in both French and English (pdf, ppt and reference books). Students must indicate in which language they would like the questions to be.

A supervised but optional end-of-studies trip enables future professionals to visit companies and exceptional foreign geological sites.
